# Clustering

Clustering and  
reverse  
engineering:  
from genes to  
the  
metabolome

Humberto  
Ortiz Zuazaga

Introduction

Clustering

Reverse  
Engineering

Dividing the elements of a set into related subsets based on a distance metric among elements.

Question: What other biological problem groups elements based on their "distance"?

# Principal components

Clustering and

# Boolean formulas

Clustering and  
reverse  
engineering:  
from genes to  
the  
metabolome

Humberto  
Ortiz Zuazaga

Introduction

Clustering

Reverse  
Engineering

True 1, False 0, and ( $\wedge$ ), or ( $\vee$ ), not ( $\neg$ )

$$1 \wedge 0 = 0$$

$$1 \wedge 1 = 1$$

$$1 \vee 0 = 1$$

$$1 \vee 1 = 1$$

$$\neg 0 = 1$$

$$\neg 1 = 0$$

# Boolean network

Clustering and reverse engineering: from genes to the metabolome

Humberto Ortiz Zuazaga

Introduction

Clustering

Reverse Engineering

**A** A directed graph structure with numbered nodes connected by edges

$x1$	1	0	1	0
$x2$	1	1	0	0
$x3$	0	0	1	0

**B** The truth table (shown for node 3 only)

$$x0 := 1$$

$$x1 := 1$$

$$x2 := x0 \text{ and } x1$$

$$x3 := x1 \text{ and not } x2$$

**C** The logic equations for each node

**Figure 1:** Example of the Boolean steady-state network model

# Expression matrix

For a set of genes and a set of perturbation experiments construct an expression matrix as shown:

$$\mathbf{E} = \begin{array}{c|cccc|c} & x_0 & x_1 & x_2 & x_3 & \\ \hline & 1 & 1 & 1 & 0 & p_0 \\ & - & 1 & 0 & 1 & p_1 \\ & 1 & - & 0 & 0 & p_2 \\ & 1 & 1 & - & 1 & p_3 \\ & 1 & 1 & 1 & + & p_4 \\ \hline \end{array}$$

**Figure 2:** Example expression matrix generated from the genetic network in fig. 1.

# Inference Procedures

Clustering and  
reverse  
engineering:  
from genes to  
the  
metabolome

Humberto  
Ortiz Zuazaga

Introduction

Clustering

Reverse  
Engineering

- From the expression matrix, the *Predictor* generates (possibly several) network hypothesis
- The *Chooser* selects a new perturbation experiment, that would best discriminate between available hypotheses.

# Predictor

Clustering and  
reverse  
engineering:  
from genes to  
the  
metabolome

Humberto  
Ortiz Zuazaga

Introduction

Clustering

Reverse  
Engineering

- Look at all pairs of experiments where a given gene differs except where it is forced (-, +).
- Build a multiset of all other genes that also changed between those rows.
- Construct the hitting set, the smallest set of elements such that there is a member of each subset.
- Generate the boolean functions by inspection of the members of the hitting set.

# The Predictor in action

Clustering and  
reverse  
engineering:  
from genes to  
the  
metabolome

Humberto  
Ortiz Zuazaga

Introduction

Clustering

Reverse  
Engineering

- $x_0$  - no changes
- $x_1$  - no changes
- $x_2$  - row pairs, set
  - (0,1)  $x_0, x_3$
  - (0,2)  $x_1$
  - (1,4)  $x_0$
  - (2,4)  $x_1, x_3$
  - hitting set  $S_{min} = x_0, x_1$

# Generating the boolean functions

- The truth table for  $x_2$  can be generated by looking at the values seen for the members of  $S_{min}$
- The '\*' represents an unknown value ( $x_0$  and  $x_1$  are never 0 in the same experiment)

$x_0$		1	0	1	0
$x_1$		1	1	0	0
<hr/>					
$x_2$		1	0	0	*
